Introduction: Olivia Neal PSSDC & PSCIOC Co-Chairs / Members Keith Jansa, A/Executive Director, CIO Strategy Council & Members of CIO Strategy Council
	1:15 – 2:15 (60 min)	<u>Responsible IoT</u>	<u>Responsible Internet of Things (IoT)</u> As the ubiquitous nature of connected sensors and endpoints increases, questions surrounding security, data collection, privacy, use and trust are becoming central to conversations regarding the future of Canada's IoT ecosystem. The explosive growth of IoT is posing significant risks to network infrastructure and to everything attached to it.	For discussion	Introduction: Olivia Neal <u>Panel Speakers:</u> Keith Jansa, Executive Director, CIO Strategy Council (moderator) Mike Monteith, CEO, Thoughtwire

IoT represents a massive and growing security risk to critical infrastructure as connected devices are coming online across all sectors of the economy, whether in transportation systems, banking, or in healthcare, as prime examples. Closing off these IoT security and privacy risks is critical to avoid a cascade of consequences such as:

- Impacts on healthcare services and life-saving equipment;
- Breakdowns in transportation networks or in accessing goods and services that ensure the well-being of Canadians;
- Shutting down cities and causing irreversible damage to public safety; and
- Damages to democratic institutions and the effective functioning of government.

This session will explore the challenges CIOs, technology and public sector leaders in service delivery face, from the introduction of new technologies (i.e., 5G, distributed ledgers and AI) to gaps in data governance (i.e., data discovery, ownership, residency, ethics and safe use). It will address key considerations in devising new standards, protocols and best practices to protect client privacy and to secure data assets without stifling IoT-related innovation.

**Responsible
Data Sharing**

There are compelling reasons for organizations to share data, from improving operational efficiencies and reducing business costs to generating new insights and making better business decisions. Failure to adhere to responsible data protection and sharing practices, however, can lead to serious consequences, from threats to an organization's reputation and brand to its

			<p>viability – a single GDPR fine can wipe out a business.</p> <p>Growing privacy breaches from inadvertent data misuse and unauthorized access is becoming an increasingly pervasive issue for governments and businesses alike. Even the most well-established organizations have fallen victim to data insecurity in recent years. While some consumers show their anger and frustration through opt-out measures, this is in no way a long-term solution.</p> <p>CIOs, technology and service delivery leaders have a critical role to play in providing much-needed leadership and action in addressing the erosion of public trust.</p> <p>This session will focus on the growing demands in re-examining data protection and exchange protocols to account for data-in-motion, at-rest and in-use within and between organizations, systems and verticals. It will address several adjacent and sometimes overlapping domains, namely security, as well as identity, privacy, confidentiality, integrity, stewardship, residency, and regulatory compliance where CIOs are more than ever having to move away from simply managing technology to managing business outcomes.</p>		<p>Nandini Jolly, CEO, CryptoMill</p> <p>Mark Alexiuk, Founder & CTO, Sightline Innovation</p>
